1. Introduction

Auction Bidding Management System (BidStream)An offline auction system designed to streamline auction processes, manage bidders efficiently in bid management.

- Problem Identified:
 - Time-consuming manual process
 - Difficult bid tracking & management
- Solution Proposed:
 - Automated auction management
 - Secure authentication & role-based access

2. Objectives

- 1. To develop an efficient offline auction system with a user-friendly interface.
- 2. Streamlining auction management with role-based access, regulated operations, and an admin panel.
- 3. To automate user notifications and enable category-based filtering in analytics.
- 4. Enhancing user experience with clear bid history and a dashboard for effortless auction participation.

3. Scope

- 1. Can be applied in offline auction houses to manage bidding efficiently.
- 2. Can be used in corporate auctions for selling company assets.
- 3. Can assist event organizers in conducting charity or fundraising auctions.
- 4. Can be useful for art galleries to manage art auctions securely.
- 5. Can be used by jewelers and private sellers can conduct high-value jewelry auctions with secure bidding processes.

4. Feature /Functionality

1. User and Admin Login:

 Secure login and registration system for users and admins. Users can sign up, log in, and participate in auctions, while admins can manage auctions.

2. Bid Placement System:

• Users can place bids on active auctions, and the system records bid history to ensure transparency and fair competition.

3. Bid Tracking & History:

 The system maintains a record of all bids placed, allowing admins to review past auctions.

4. Feature /Functionality

4. Role-Based Access Control:

• Users can participate in bidding, while admins have exclusive rights to manage auctions, ensuring system security.

5. Automated Notifications:

• Users receive notifications for auction they won and bid confirmations for successful bidding.

6. Filter Options:

Admin can filter auctions by categories in analytic page.

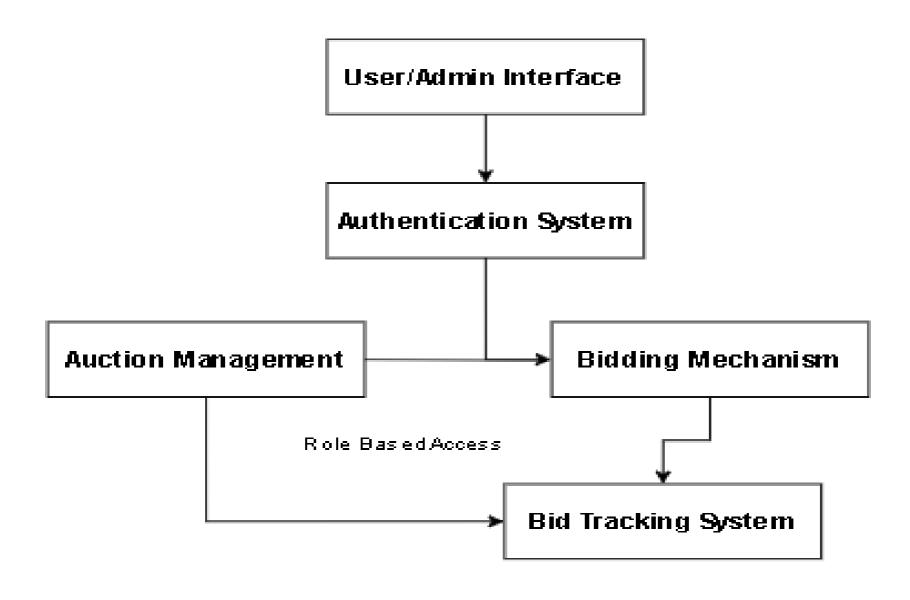

5. Outcome of Project

- 1. User can log in with registered details
- 2. User can register by creating a new account.
- 3. Users can view active auctions and auction details.
- 4. Users can place bids on available auctions.
- 5. System records and tracks bids for each auction.

6. Technology Stack

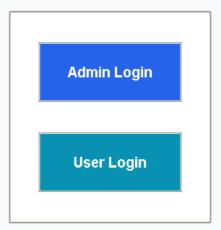

- 1. Python (Tkinter)
- 2. MySQL
